Subject : Application to job offer *Piping Systems Estimating Engineer*

Dear Sir or Madam,

I am a graduate student in a selective and demanding master's degree in mechanics of solids and structures, specializing in computer sciences. In a constant desire to progress, I would like to apply to the job offer *Piping Systems Estimating Engineer* in your department of Rancho Cordova.

As part of my master cursus, I did an international mobility at KTH, Stockholm, SWEDEN. This unique experience allowed me to collaborate with students from all over the world, through a project of a plane flying under ground effect. I then discovered a genuine desire of exchanging and working as part of a group through rewarding collective experiences.

My formation includes theoretical teaching units, numerical computation and experimental implementations, making my knowledge of the mechanical field vast and above all complementary, which would make me the ideal candidate for this post.

I am motivated and willing to fulfill, and looking forward to discussing my application, please accept, Ms., Mr., the expression of my distinguished feelings.
